

NATIONAL OMNIBUS SURVEY QUESTIONS

For Climate Caucus

SEPTEMBER 2026

Methodology

This research was conducted via online survey with 2,762 adults (age 18+) living in Canada from September 18 to 23, 2026. A random sample of panelists were invited to complete the survey from a set of partner panels. These partners are typically double opt-in survey panels, blended to manage out potential skews in the data from a single source.

The margin of error for a comparable probability-based random sample of the same size is +/- 1.86%, 19 times out of 20.

The data was weighted according to census data to ensure that the sample matched Canada's population according to age, gender, educational attainment, and region. Totals may not add up to 100 due to rounding.

When global oil and gas prices climb sharply due to events like wars or international supply disruptions, energy companies can earn profits far above their historical norm. For example, in Canada, US-owned oil and gas companies are expected to generate billions in profits this year due to the rising cost of oil and gas. These are called windfall or excess profits. The United Kingdom introduced a 78% tax on the excess profits of oil and gas companies. | How much would you support or oppose the following policy?

Two thirds of Canadians (76%) support the introduction of a tax on oil and company excess profits, with revenues used to help Canadians lower their energy bills.”

Support is higher among LPC (83%), and NDP (86%) voters.

The federal government removed the excise fuel tax on gasoline and diesel this summer, and recently extended the pause until 2027. Even with the pause, the cost of gasoline has continued to rise across Canada. The extension of the excise fuel tax will cost the government \$5.3 billion in lost revenues. | Has the federal excise tax pause...

The majority of Canadians say the federal excise tax pause has not changed their household finances, an additional 14% say it's worsened their household finances.

Younger Canadians are more likely to recognize improvements.

NATIONAL OMNIBUS SURVEY QUESTIONS

For Climate Caucus

OCTOBER 2026

Methodology

This research was conducted via online survey with 3,223 adults (age 18+) living in Canada from October 2 to 13, 2026. A random sample of panelists were invited to complete the survey from a set of partner panels. These partners are typically double opt-in survey panels, blended to manage out potential skews in the data from a single source.

The margin of error for a comparable probability-based random sample of the same size is +/- 1.72%, 19 times out of 20.

The data was weighted according to census data to ensure that the sample matched Canada's population according to age, gender, educational attainment, and region. Totals may not add up to 100 due to rounding.

How much do you agree with the following statement? “The federal government should implement solutions which fight both climate change and address President Trump’s tariffs.”

77% of Canadians agree the federal government should implement solutions which fight both climate change and address President Trump’s tariffs.

This is highest among those 60+ (81%), LPC (88%), and NDP (86%) voters.

More than 60% of Canadians were directly impacted by floods, wildfires, excess heat, unsafe air quality and other climate impacts this year to date, costing families thousands, and communities billions. Nation-building projects, like a national electricity grid or rapid buildout of home retrofits, can support communities and strengthen our economy in the long run.
